PROFILE

I have a bachelor's degree in general Psychology and a Master's degree in Neurocognitive Psychology. Previously, I worked on several projects in the field of cognitive neuroscience, focusing on understanding the dynamic of affective and perceptual processes under different contextual demands and its relationship with psychopathology. More recently, I became interested in the clinical translation of basic neuroscience findings and my PhD project will focus on investigating the extent to which state-of-the-art resting-state fMRI and multimodal brain measures are useful for outcome prediction and subtyping in early stages of psychiatric disorders.
