

Important Information
Doctor of Philosophy (Ph.D.) in Medical Research - Cardiovascular Science

Under the umbrella of the Munich Medical Research School (MMRS), an interdisciplinary Ph.D. program in 'Cardiovascular Science' is being established (Ph.D. MR – CVS). This full-time English-language program aims to comprehensively train national and international students in all aspects of cardiovascular science in order to expand the frontiers of research in this field.

In this regard, the Ph.D. Medical Research – Cardiovascular Science Program Coordination explicitly advises all applicants that this program is a structured full-time doctoral program. All doctoral projects are pure research projects to be conducted on a full-time basis. It is an academic and scientific training, not a clinical one. With this in mind, the program does not count towards the duration of residency training. Residency training will be interrupted for the duration of participation in the Ph.D. Medical Research – Cardiovascular Science program.

Hereby, I confirm,
(please fill in legibly and in block letters)

that I understand that the time I spend within the aforementioned doctoral program (expected to be between 3 and 5 years) will not count towards the duration of my residency training. In addition, I am informed that all trainings and activities carried out within the context of this doctoral program are considered as independent academic achievements and have no influence on the regular duration or progression of my residency training. It is not possible to count study time toward residency training.
